SAJID MANZOOR

Technical Support Engineer | REST APIs, Node.js, Networking & SIP/VoIP
Gurgaon, Haryana, India | +91-9149979829 | sajidmanzoor730@gmail.com
linkedin.com/in/sajid-manzoor-730zz | github.com/sajidmanzoor730 | sajidmanzoor730.github.io/sajid-portfolio

PROFESSIONAL SUMMARY

Technical Support Engineer with 4+ years in technical support across Node.js/React applications, REST APIs, networking and SIP/VoIP, including L2 support since 2024 on a business VoIP service for 150+ customer teams. Skilled at isolating whether a problem lives in client-side code, an API, a database query or the network, and at explaining the cause and the fix clearly to both engineers and non-technical customers.

CORE SKILLS

Support & Troubleshooting: L2 technical support, incident triage, root-cause analysis, SLA-driven queue management, escalation to engineering, customer de-escalation, customer communication (phone and email), case documentation

Web & APIs: JavaScript, Node.js, React.js, Express.js, HTML5/CSS3, OOP concepts, Chrome DevTools, REST APIs, HTTP, JSON, Postman

Data: SQL (query writing and data investigation), MySQL

Networking: TCP/UDP, DNS, DHCP, VPN, NAT, firewalls, SSL/TLS, Wireshark

VoIP & Telephony: SIP, RTP, IP PBX, call-flow and registration troubleshooting, codec mismatches, one-way audio and call-drop diagnosis

Tools & Languages: JIRA, ServiceNow, Git, PuTTY | Java, Python

PROFESSIONAL EXPERIENCE

Technical Support Engineer | A2N Technologies Pvt Ltd, Jammu & Kashmir, India
Jan 2024 - Present

- Provide L2 support as part of the team covering A2N's business VoIP service for 150+ customer teams, taking escalated SIP/RTP, networking and application cases; handle roughly 8-12 tickets a day, more during outages, prioritised P1-P4 against priority-based SLA targets, tracking response, escalation and resolution progress in Jira.
- Handle P1 cases where customers are upset about call drops, one-way audio or registration failures during business hours: acknowledge the business impact, trace the SIP flow in Wireshark (INVITE, provisional and final responses, RTP), isolate causes such as firewall/NAT behaviour with the network team, keep the customer updated with ETAs in Jira, confirm the fix with test calls and document the steps in a runbook.
- Resolve SIP/VoIP call-quality issues (call drops, one-way audio, registration failures, codec mismatches) by correlating call-flow traces with network conditions.
- Isolate connectivity problems across TCP/UDP, DNS, DHCP, VPN, NAT, firewalls and SSL/TLS with Wireshark before escalating, so network engineering receives a narrowed-down cause rather than a vague symptom.
- Trace server-side issues in Node.js and Java applications through logs, then confirm findings with SQL queries.
- Separate client-side from server-side causes of REST API and HTTP integration failures using Postman and request/response analysis.
- File reproducible bug reports in JIRA with logs, request/response samples and packet captures, and escalate to development and infrastructure teams with clear impact and steps to reproduce.
- Document recurring issues and fixes in runbooks and knowledge-base articles so other engineers can resolve similar cases faster.

Software Support Associate | Global Management Services, Delhi, India
Jun 2022 - Dec 2023

- Supported enterprise web applications built on JavaScript, Node.js and React.js, troubleshooting both client-side rendering issues and server-side logic.
- Used Chrome DevTools, application logs and OOP fundamentals to trace bugs to their source and explain fixes to engineers and non-technical stakeholders.
- Tested and validated RESTful services in Postman to determine whether issues came from the API contract or the calling application.
- Queried application data with SQL during diagnosis and worked with network teams on latency and connectivity tickets.
- Owned customer incidents end to end in JIRA and ServiceNow: logging, prioritizing, tracking to resolution and keeping customers updated.

PROJECTS

VoIP Support Automation Toolkit | Python, SQL, Wireshark, Postman
github.com/sajidmanzoor730/voip-support-automation

- Built a Python and SQL toolkit for VoIP support from public Wireshark SIP/RTP sample captures: a SIP log parser, SQL investigation queries, Postman API health checks, Wireshark filters and an incident-triage runbook. Uses public sample data only; no employer or customer data.

Helpdesk KPI Dashboard | Python, Pandas, Streamlit
github.com/sajidmanzoor730/helpdesk-kpi-dashboard

- Cleaned a raw ticket export (1,020 rows to 1,000 unique tickets) and built an interactive Streamlit dashboard reporting SLA adherence, CSAT and repeat-ticket rate on a synthetic practice dataset.

Microsoft Security Investigation Lab | Microsoft Defender concepts, Sentinel, KQL
github.com/sajidmanzoor730/microsoft-security-lab

- Practice lab investigating endpoint alerts: severity triage, suspicious-activity analysis, MITRE ATT&CK mapping and incident reporting, using a clearly labelled practice dataset. No employer or customer data.

EDUCATION

Bachelor of Computer Applications (BCA), Amar Singh College, 2021
