SUMMARY

Operations Analyst with 4+ years of experience across operations analytics, reporting, data quality, KPI tracking, and business analysis. Hands-on with SQL, Python, Pandas, Excel, and Power BI for cleaning and reconciling data, analyzing operational performance, building KPI reports and dashboards, and investigating recurring issues. Targeting Data Analyst and BI roles where I can apply operational analytics, KPI reporting, data validation, and business-focused analysis.

CORE SKILLS

Data Analysis	Data Cleaning, Data Validation, Data Reconciliation, Data Profiling, Exploratory Data Analysis, Trend Analysis, KPI Analysis, Root-Cause Analysis
SQL	JOINs, GROUP BY, Aggregations, CTEs, Window Functions, ROW_NUMBER, RANK, LAG, Filtering, KPI Queries
Python	Python, Pandas, NumPy, Data Transformation, Automation, CSV/Excel Processing, Analytical Workflows
BI & Reporting	Power BI, DAX, Data Modeling, KPI Dashboards, Excel, PivotTables, VLOOKUP, XLOOKUP, Conditional Formatting, Streamlit, SLA Reporting
Data Quality	Duplicate Detection, Missing-Value Checks, Reconciliation, Issue Classification, Validation Rules, Documentation
Tools	ServiceNow, JIRA, GitHub, Google Sheets

PROFESSIONAL EXPERIENCE

EDUCATION

Bachelor of Computer Applications (BCA)
Amar Singh College (Cluster University) · 2018 – 2021

SELECTED ANALYTICS PROJECTS

Helpdesk Ticket KPI Dashboard

Python • Pandas • SQL • Power BI • Streamlit

- Built an end-to-end helpdesk analytics project covering data cleaning, KPI analysis, SQL analysis, and dashboard reporting.
- Worked with a synthetic helpdesk ticket dataset containing 3,672 raw rows and 3,600 unique tickets, with documented duplicate and missing-value issues.
- Used SQL window functions including ROW_NUMBER() and LAG() for duplicate handling and period comparisons.
- Found 90.5% SLA adherence, 3.77/5 CSAT, 9.2% repeat tickets, and 95.1% source-data quality across the dataset.
- Analyzed ticket volume, resolution times, SLA performance, CSAT, repeat tickets, and operational trends.
- Built interactive Streamlit and Power BI reporting views and documented the data model, KPI definitions, cleaning process, and validation approach.

BI Validation & Monitoring

Power BI • SQL • Python • Data Quality

- Built a BI validation framework for operational KPI reporting, covering raw-data quality, transformation rules, SQL reconciliation, and dashboard validation.
- Validated 8,160 raw records against 8,000 cleaned records, covering 24 issue types and 765 row-level findings.
- Defined business rules for duplicates, missing values, invalid categories, SLA logic, QA results, rework, and derived fields.
- Designed a Power BI reporting structure covering executive KPIs, operational performance, data quality, and KPI reconciliation.
- Documented cleaning rules, analytical workflow, validation framework, and reconciliation approach.

KPI Operations Dashboard

Excel • Operational Analytics • KPI Reporting • Data Quality

- Built an operational KPI dashboard for monitoring completion, SLA achievement, QA coverage, data validity, rework, and workload.
- Structured operational records with filters for team, priority, and region and calculated performance metrics and trends.
- Used operational breakdowns and KPI views to support performance monitoring and identify areas requiring investigation.
